

ETHRAEON

AI governance that executes, not advises.
Measurable. Enforceable. Sovereign-ready.

53 PATENTS

T5-RIGID

FAIL-CLOSED

Founded by S. Jason Prohaska · Ethraeon BV (Netherlands)

The Problem

Organizations deploying AI face a regulatory and liability gap. Existing solutions monitor. They do not enforce.

EU AI Act

Effective 2024-2025. Requires governance frameworks for high-risk AI. Compliance windows are closing.

No Runtime Enforcement

Current solutions offer dashboards and audit logs. They report violations after the fact. They do not prevent them.

12-18 Month Window

First-mover advantage in runtime governance. Enterprise adoption accelerating without corresponding tooling.

The Solution

ETHRAEON sits between AI model output and downstream action. Every decision is gated, logged, and cryptographically sealed.

RTP

Temporal Governance

How It Works

Every AI action passes through constitutional enforcement before execution.

Fail-Closed
 Every request denied unless explicitly authorized by policy.

Evidence on Every Action
 Cryptographically linked, append-only, tamper-evident.

Semantic Invariance
 DELTASUM hashes lock data integrity. No silent drift.

Temporal Governance
 KAIROS enforces time-bounded operations with ethics audit.

Constitutional Governance

Five tiers of governance enforcement. ETHRAEON operates at the highest: T5-RIGID.

TIER	NAME	ENFORCEMENT
T1	Advisory	Suggestions only
T2	Monitored	Log violations
T3	Enforced	Block violations
T4	Strict	Block + escalate
T5	RIGID	Fail-closed · No override below AC-1

AC-1
Founder
 Full override

AC-2
CFO
 Capital + audit

AC-3
Tech Lead
 /app + /ops

AC-4
Operator
 Execute only
